Regular, periodic cleanings contribute to a home's healthy environment and extend carpet's life.

# Residential Carpet Cleaning Service

*The Most Thorough Cleaning*

## Natural Health Benefit

### Carpet & Fabric Protectors

**Included at no extra cost with every residential cleaning**

Protectors keep dirt from sticking to carpet fibers, making carpet easier to care for.

Carpet protectors are also designed to repel most liquids, allowing spills to be removed before staining and wicking—the migration of soil to the tips of the yarns during the drying process - can occur.

### Truck Mounted "Steam" Cleaning

*The most widely recommended cleaning method among carpet manufacturers.*

Spotsmith employs the truck mounted hot water extraction method of cleaning commonly referred to as "steam" cleaning.

A hot water cleaning solution is sprayed onto the carpet to break down soil and other contaminants. The solution along with the carpet soil and contaminants are immediately extracted.

### Carpet an Indoor Filter

Carpet functions as a gathering place for everything that is tracked in or settles out of the air in your home.

Household particles from pets and other sources naturally fall to the floor. Pollen, dust, insect matter and others are trapped in the carpet fibers. Regular maintenance effectively removes these dust and allergens from the carpet. It helps keep these particles out of the air we breathe.

### Allergen Containment

Studies have shown that carpet is better at trapping allergens than hard surface, such as tile or hardwood, because carpet fibers catch particles and allergens that fall to floor. When allergens are trapped in the carpet, they cannot circulate in the air for you to breathe.<sup>1</sup>

### Vacuum, Vacuum, Vacuum

Regular, thorough vacuuming of carpets and rugs is the most effective tool for maintaining a home's optimal health environment.

### Regular Professional Cleaning: Every 12 -18 Months

Manufacturers recommend extraction cleaning carpets every 12-18 months. A deep extraction cleaning will kill disease & odor causing organisms, fights fungi, bacteria, virus, mold, mildew, and mycobacterium tuberculosis.
